Review of Assessment Report Referenced WF No. 147512 Issue 2

1 Introduction

The assessment report referenced WF No. 147512 issue 2 presented a considered opinion regarding the fire resistance performance of timber or mineral composite based doorsets in single or double-leaf configurations when fitted with the Salamander Firecheck letterplates and door viewers.

The report concluded that following its recommendations, it could be concluded that the proposed Salamander Firecheck letterplates and door viewers could be installed within previously tested doorsets (which have achieved 30 or 60 minutes integrity performance with respect to BS 476: Part 22: 1987), without detracting from the overall performance of the doorsets.

2 Confirmation of Specification

It has been confirmed by UAP Limited that there have been no changes, to the specification of the products considered in the original appraisal referenced WF No. 147512 issue 2.

3 Conclusions

The procedures adopted for the original assessment have also been re-examined and are similar to those currently in use.

Therefore, with respect to the assessment of performance given in WF No. 147512 issue 2, the contents should remain valid until the 1st June 2015.

4 Validity

This review is based on information used to formulate the original assessment. No other information or data has been provided by UAP Limited which could affect this review.

The original appraisal report was performed in accordance with the principles of the UK Fire Test Study Group Resolution 82: 2001.
